Strawberry Plants

AND OTHER SMALL
FRUITS

THE E. W. POTTER COMPANY
LESLIE, MICHIGAN

Cultural Directions

MATING—

All strawberry blossoms are either staminate—also called perfect—or pistillate, generally called imperfect.

The imperfect varieties which are marked (Imp.) in catalog, should have a perfect variety, marked (Per.) set every third or fourth row to properly pollenate the blossoms of the imperfect sorts.

There seems to be a mistaken idea with some that this mixing of varieties is necessary with the perfect as well as the imperfect sorts; but this is not so. The perfect are self-pollinating, and bear as well if set by themselves.

TIME TO SET PLANTS

Early Spring is the logical, natural, most successful and satisfactory time to set Strawberry plants. So don't neglect setting some plants this Spring thinking you can make it up by early Fall planting. It can't be done.

How early? Just as soon as weather permits getting ground ready.

We are anxious at all times to please our customers, who in some way fail to get their plants in the spring, by sending them a few in the fall. However spring is by far the best time to plant strawberries. Spring planting is preferred because weather conditions are more favorable and because the plants come into bearing the next season. Fall set plants have to go through two winters before they start to fruit and the effect of winter is never beneficial to their plantation. To those who are unfortunate and do not obtain their plants in the spring, we will gladly supply their needs at double the price in catalog.

NORTHERN GROWN PLANTS

A strawberry is never in so prime a condition as when fully grown, matured and dormant. Our friends in the South have recognized that our Northern grown plants are safer to set, because of their more dormant condition on arrival, while commercial growers in the North and West would not think of setting Southern stock of a more advanced growth. We also hold that while the strawberry will grow and thrive nearly everywhere, the North is its natural home, where it fits the conditions more naturally for a higher development.

WE SHIP PLANTS

to Southern customers during mild weather any time after they receive this catalog, and to the North as late as the 15th of May, but for all sections it is advisable to order early, and name date of shipment as early as you can use the plants. Plants shipped early have less foliage, can be packed lighter, and if planted almost always do well.

OUR SHIPPING SEASON

begins with the Southern orders, as soon as frost is out of the ground in spring, often in March. We aim to set out plants in early April. If ordered late in the season, it is always best to name a second or third choice in case a variety is sold out, or leave it to us, stating soil conditions and other particulars. We will do our best to please you, but order early and have plants come early, if you can.

REMOVING THE BLOSSOMS—

Strawberry plants that are set out this spring should not be allowed to bear fruit until the following spring. The blossoms should be pinched off, for to let them ripen fruit the first year would weaken the growth of the plants and is liable to kill them. Just as soon as you remove the blossoms your plant starts to work building up a root system. The heavy, vigorous root system is essential to enable the plant to come to its fullest possibilities of production.

NUMBER OF PLANTS REQUIRED TO SET AN ACRE—

1 x 1 foot	43,560	5 x 3 feet	2,904
2 x 1 foot	21,780	5 x 4 feet	2,178
2 x 2 feet	10,890	6 x 1 foot	7,160
3 x 1 foot	14,250	6 x 2 feet	3,360
3 x 2 feet	7,260	6 x 3 feet	2,420
3 x 3 feet	4,840	6 x 4 feet	1,815
4 x 1 foot	10,890	6 x 5 feet	1,425
4 x 2 feet	5,445	6 x 6 feet	1,210
4 x 3 feet	3,630	7 x 1 foot	6,122
4 x 4 feet	2,723	7 x 2 feet	3,111
5 x 1 foot	8,712	7 x 3 feet	2,074
5 x 2 feet	4,356	7 x 4 feet	1,555

How To Grow Strawberries

Anyone who will take reasonable care of strawberries, are sure to grow some fruit. We have never in all our years experience had a complete failure. There are no certain rules how strawberries should be grown. Keep them free from weeds and you will have plenty of berries. There is no other fruit you can plant that will bring results as quick as strawberries. Everyone who has a bit of land ought to plant them. We have the varieties that will pay you to plant. Try a few and be convinced.

THE DESCRIPTION of the different varieties is as they have done with me at fruiting time. Varieties that I have not fruited I have given originator's description, or others', that I consider best authority.

Be sure to order early enough so that plants can be right at hand as soon as your ground is ready. Early setting pays big—the plants start quicker, grow better and make better beds than plants set late.

GREETINGS

1930

It is on this beautiful morning, dear friends, that we greet you. We wish to thank those of you who purchased from us last year and assure you that we appreciate your kindly words of praise for our plants and method of doing business.

Last year a great many orders had to be returned because of those who waited too long in placing their orders, hence, the advisability of ordering early.

The time was never more opportune for the small fruit grower than now. There are comparatively so few acres adapted to small fruit production and so few people who like the work sufficiently well to succeed. Every farmer should by all means have his own fruit garden where he can go every day in season and pick just all of the fresh fruit he wishes to eat in the field and on the table. Plenty of small fruit on the farm will help to keep the boys and girls contented.

We deem it a privilege indeed to live in the pure air and freedom of our country and especially to engage in the production of small fruit plants. It is a never ending source of pleasure to walk about among the different varieties of strawberries and observe their peculiarities of growth. We take great pains to know that all of our varieties are true to name.

We hope you may have a successful season and wish every one the best of luck with the plants you have purchased from us. Our interests are indeed mutual, that we may be successful, you must succeed with the plants we sell, and we are not satisfied unless you are satisfied.

We wish you all prosperity for the year.

Most sincerely,

THE E. W. POTTER CO.

THE E. W. POTTER CO.:

2-27-29.

All of the strawberry plants I got of you last spring were very nice and all lived. The 100 Mastadon are the greatest ever-bearers I ever saw. We began picking strawberries off of them the last of July and the last picking was the last part of November when it froze them and they were yet loaded with green berries and blossoms. I picked from the 100 plants 132 quarts. If anyone had told me this I would not have believed them. I set them on a very exceptionally rich heavy loam sand. Now, Mr. Potter, you cannot praise the Mastadon too highly and your prices on all of your plants were the cheapest of them all and as nice plants as I ever got from any one.

Yours truly,

E. J. HUMPHREY,
Eaton County, Michigan.

March 14th, 1929.

The E. W. Potter Co.,
Leslie, Mich.

Gentlemen:—

The plants I received from you last year grew fine. Please book my order for the following order.

Thanking you, I am,
MRS. ANNA M. COOK,
Ingham County.

June 18th, 1929.

The E. W. Potter Co.,
Leslie, Mich.

Gentlemen:—

The strawberry plants I received from you were fine and nearly every one grew. Thanking you, I am,

Respectfully,
F. N. PERRIN,
Oakland Co., Mich.

Lenawee County, Mich.
May 1st, 1929.

The E. W. Potter Co.,
Leslie, Mich.

Gentlemen:—

The plants arrived in good condition and we set them out. They are all doing fine.

Respectfully,
J. G. NASH.

READ THIS ONE

Des Moines County, Iowa.
May 22nd, 1929.

The E. W. Potter Co.,
Leslie, Michigan.

Gentlemen:—

Received the plants in fine shape. Have them all set and they are doing fine. I am well pleased with them.

Respectfully,
E. ALICE ROGERS.

P. S. I am sorry I did not order earlier, so to get all the varieties I wanted, as Potter's is the best place in the U. S. to get plants. That is why you cannot supply your trade because everybody wants Potter's plants.

Aroostook County, Maine.
May 27th, 1929.

The E. W. Potter Co.,
Leslie, Mich.

Gentlemen:—

Please quote me your prices on strawberry plants. Knowing by previous experience that you send out the best stock I shall rely on receiving same, by parcel post.

Respectfully,
FRED B. PERKINS.

YELLOW DENT SEED CORN

This corn has been selected and only the very best is offered. It is a heavy yielder of medium sized ears, handsome appearance of rich yellow color. It is an early variety and will mature in ninety days.

Shelled, per pound

10c

PECK'S EARLY POTATOES

We have grown this early variety for many years and can strongly recommend them. They grow uniformly large and the yield is better than any early variety we know of. If you want a sort that will ripen early, and a heavy yielder of good quality, try them. They are pinkish in color and resemble the early Ohio. Per bushel

No. 1, \$5.00; No. 2, \$2.50

Strawberries We Grow

ABINGTON (Per.)—

We have fruited Abington for years and find it a strong grower, with large luxuriant foliage. The fruit is large, quite similar in size and shape and color to Sharpless, but more abundant. (Mid-season).

AROMA (Per.)—

One of the most popular late varieties. A good plant and a good bearer of large, handsome fruit, bright red in color; uniform roundish heart shape, firm and of good quality. Somewhat resembles Gandy in appearance. A choice variety and reliable.

AUGUST LUTHER (Per.)—

A good grower and reliable. Fruit large, glossy, bright red, firm and of good quality. This berry comes early, always making a good crop before berries lower much in price, and for several years has been our choice for early market among the standards.

BUBACH (Imp.)—

Fruit large, moderately firm, good color and quality well known standard variety; productive and reliable. Mid-season. We are nearly always sold out of this variety before the season is over.

BEDERWOOD (Per.)—

Well known standard early market variety. A tough, healthy grower. Very successful especially in the west prairie country. Fruit medium to large size round, bright red, good quality. A good carrier and very productive.

BRANDYWINE (Per.)—

Fruit large, dark red, quite firm, good quality. Not always at its best in some sections, but a good variety in others; requiring strong loam soil and high culture for best results. Medium late.

CAMERON'S EARLY (Per.)—

Extra early. This fruit is of good size for so early a berry; medium red in color and of good quality. A vigorous grower, with a tall foliage to protect the bloom from late frosts. Productive and reliable.

CLYDE (Per.)—

Very productive. Fruit large, round, bright glossy red. Large, healthy plants. Well known standard market variety. Mid-season.

CAMPBELL'S EARLY (Per.)—

Very early. This variety produces a good crop of large bright red berries. Worthy of trial.

COOPER (Per.)—

Mid-season. Plants are strong growers and very productive. The fruit is large, beautiful in color and has a delicious flavor.

COMMONWEALTH (Per.)—

Very late. James Munroe (the introducer) in his description says the Commonwealth is the outcome of the desire and effort to produce a berry that would lengthen the strawberry season. In it we have a berry that is as large as the largest, as productive as any, has fine flavor, as solid, and as dark a color as any. The plant is a strong grower, but not so rank as some. The fruit is large, firm, dark color and very handsome. Later than Gandy.

CORSICAN (Per.)—

This is a favorite variety especially around Rochester, N. Y. The plants are large and good growers. Fruit large, longish heart shape, good quality; stands shipment well. Mid-season. Very similar in plant and fruit to Uncle Jim. A good variety.

CHESAPEAKE (Per.)—

If this variety was a better plant maker it would be the leading late berry, for it has them all beat for size, productiveness and quality. We have tried it on all kinds of soil, but fail to get a good plant row. We hear similar results from other sections. The berry is large and regular in shape; color bright red. Quality much better than Gandy.

DR. BURRILL (Per.)—

This variety stands among the very best in the mid-season strawberries. Several dealers say as good as Dunlap or better. It resembles Dunlap in many ways. It is exceedingly productive, of medium to large, well shaped, glossy red. Through and through we have yet to hear a poor report on Dr. Burrill.

EXCELSIOR (Per.)—

The well known standard early market variety. Plants vigorous, making many runners. Fruit medium to large size; round; dark red; firm; quite tart. Reliable and productive.

EARLY OZARK (Per.)—

Early. The introducer of this berry says it is a cross between Excelsior and Aroma. He further states that it is a perfect bloomer and has very large blossoms that are rich with pollen. It is the largest extreme early variety I have ever tested. The plants grow strong and are healthy. The fruit is firm, excellent flavor and good color, being bright red, about the same as the Aroma. It is said to be very productive. The fruit is large, good color, and firm.

GANDY (Per.)—

Fruit large, firm, high quality and handsome. A good grower and productive. The well known standard late shipping berry.

GLEN MARY (Imp.)—

Fruit large, dark red, quite firm and good quality. A good grower, productive and reliable. This variety has small stamens, sufficient for itself, but not to fertilize adjoining pistillates, and so we class it as an imperfect bloom. Mid-season to late.

GIBSON (Per.)—

This is not the old variety of that name which originated in eastern New York several years ago, but a distinct variety of local fame. The berry is large and regular in shape, holding its size well to the end of the season. Color rich red. Flavor is neither too sweet nor too sour, but just right for canning. It makes a good plant row and is worthy of trial.

HOWARD NO. 17 (Per.)—

Fruited here for the first time. Produced good size of fruit of fair quality. Large, stocky plants, making a good fruit row. Worthy of trial.

HAVERLAND (Imp.)—

Very productive. Large fruit, rather long; bright light red; firm, good quality. Plants large and vigorous. Well known standard variety and reliable. Season early to late.

KING WEALTHY (Per.)—

Very late. A new variety. Our introduction. Makes good fruit row. Has a strong staminate blossom, fruit large, handsome, well shaped, and dark red. Fine for canning. Worthy of trial.

KELLOGG'S PRIZE (Imp.)—

This Pistillate variety is claimed to cover a long season. After giving it a good trial we find it to be a variety of great merit. It was one of the best varieties we fruited the past season. The plants are strong growers and very productive. The fruit is high color, fine flavor and very large. Quite late.

LUPTON (Per.)—

Late. A large very handsome berry and an excellent shipper. The berries average about as large as Chesapeake.

MARSHALL (Per.)—

A standard of quality. Very dark red; heart shape, firm and of high quality. A moderate plant maker of large, stocky plants.

PARSON'S BEAUTY (Per.)—

A good healthy grower and an immense cropper of large, solid, dark red berries of good form and quality. There is probably not a variety among the standards that will outyield it, or a more reliable. A first-class variety, with a long season.

PENNELL (Per.)—

Fruit large, nearly round; dark, rich color; firm and of the very highest quality. We think more of the Pennell every year. It always bears abundantly, and is one of the varieties to which we direct friends who visit us at fruiting, who want something extra fine. Grow Pennell on strong loam and be surprised with the large size and excellence of this berry. An all-season variety.

PRIDE OF MICHIGAN (Per.)—

Mid-season. From Mr. Baldwin of Bridgeman. There seem to be two varieties by this name, but as the Kellogg strain is similar if not identical with New York, which was discarded by us some time ago, we will only offer the Baldwin strain. The berries are large, rather oblong, very bright red, glossy, and beautiful; it being very firm, makes it an excellent shipping berry. The plant is vigorous, making a good fruiting row in any kind of season.

PREMIER (Per.)—

An early variety, being large of extra good quality, and color being fine, which makes it a good shipping berry. We consider this one of the larger of the earlier varieties. The berries are firm and beautiful in form and have few weak points. Has extra long season and is worthy of trial.

ST. LOUIS (Per.)—

While some claim this variety is a second early, we find it extra early and one of the first to ripen. We have been highly pleased with it for some time and can recommend it as Queen of Earlies. This berry is not firm enough for long shipping, but as it has so many good points every grower should plant some. Mr. Bauer, the introducer, claims to have grown them so large that twelve of them would fill a quart basket. As grown here, it makes a strong, healthy plant, with plenty of runners. Fruit very large for such an early berry. Light red color, nearly round and good quality.

STEVEN'S LATE CHAMPION (Per.)—

A variety that is a splendid, healthy grower, with tall, dark green foliage and long runners. The fruit is large and fine, resembling Gandy. Firm and of good quality, outyielding Gandy here last year and selling at the highest prices. It is certainly a good variety.

SAMPLE (Imp.)—

Standard market variety. Mid-season to late. Fruit large, roundish conical; bright glossy red; moderately firm and of good quality. A good grower. Productive and reliable.

SENATOR DUNLAP (Per.)—

This variety has given general satisfaction in almost all sections and all kinds of soil, and the demand for plants increases each season. It makes plants of only medium size but tough and hardy, with long roots and a surprising capacity for enduring hardships. It is very productive and usually matures every berry. They are of good size, bright glossy red, and of excellent quality. It is a first-class shipper and retains its brightness after being picked. It ripens early and continues a long time in fruit. It is grown largely as a commercial berry.

UNCLE JIM (Per.)—

This variety is an excellent grower of large, stocky plants. The roots grow down deep in the soil, making it very popular in sections with limited rainfall. The fruit is very large, high colored and of excellent quality. It is famous for its delicate, rich, sub-acid flavor which makes it possible for the most confirmed dyspeptic to enjoy. We can recommend this variety to those looking for large fancy fruit.

WARFIELD (Imp.)—

The well known standard shipping and canning berry. Plants are vigorous and productive. Fruit nearly round, dark glossy red, firm and of good quality. Mid-season. This and Dunlap make a good, strong team.

WM. BELT (Per.)—

This variety is large planted in some sections, while in others it is inclined to rust. It is a fancy variety that always brings fancy prices. It is quite productive, berries very large, roundish conical, color a bright glossy red, and the flavor good. Mid-season.

PROGRESSIVE

Fall Bearing Strawberries

The Everbearing Strawberry has been tested in every locality and has proven its value in every place where fair attention has been given it. The plants are absolutely hardy and with ordinary conditions you will get as good a crop in June as from the June varieties and with fairly favorable weather you will get berries from July until freezing weather. They will stand more freezing than other sorts. Try them.

PROGRESSIVE (Per.)—

This is a vigorous, thrifty grower making a matted row of 2 or 3 ft. wide in fact, the best plant maker of all the fall bearing kinds. The color of the foliage, manner and habit of growing somewhat resembles the Dunlap. The quality of the fruit is not ordinary medium, but is extraordinary, ranking with the very best. Mr. Harlow Rockhill of Iowa is the originator of this wonderful variety and he has reason to be proud of it. He says, "Progressive is a leader in the country." Keep blossoms picked off until about July if you want a full crop.

AMERICUS (Per.)—

One of the best known and the most prominent of the Everbearing. A seedling of the Pan-American. Plants are strong and deep rooted. The fruit is firm and medium to large in size, light red, and extra good quality. It is a fairly good plant maker. It will produce fruit on the new plants as soon as well rooted.

PEERLESS (Per.)—

A variety which has proven successful. Plants are strong and deep rooted. It resembles Superb both in fruit and manner of growing.

MASTADON (Per.)—

This is another everbearer with big claims made for it. It originated in Indiana and was introduced from Michigan. Said to be fully as productive as Progressive; much larger; firmer and of good quality. It grows well and is certainly worthy of a trial. We recommend a trial of it.

Instructions to Purchasers

ORDER EARLY

It will insure you getting the varieties you want and it will help us to get your plants shipped promptly when you want them.

PLEASE remit by P. O. Money Order, Express Order, Registered Letter, or Bank Draft.

LOST ORDERS—

All orders are acknowledged by postal card same day received, but if you should not hear from us in a reasonable length of time after sending an order, PLEASE WRITE PLAINLY, giving full particulars, NAME AND ADDRESS.

Once in a while an order is lost, but it usually is caused by the customer failing to give the full address. Therefore, PLEASE WRITE PLAINLY, especially your name.

TERMS:—Payment must be made before shipment of plants. If not convenient to remit entire amount when order is sent remit not less than one-fourth of the amount of the order and your order will be booked and held for you and you can remit the remainder when convenient, before shipment of plants.

WE GUARANTEE the safe arrival of plants in good condition if sent by mail or express by May 1st.

WE TAKE the greatest care to have all plants true to name and seldom ever have a complaint, but should any prove otherwise than represented. We will not be responsible for any amount greater than actually paid me for the plants.

CLAIMS. if any, must be made on receipt of plants when they will be carefully examined, and if just, made satisfactory.

FOR OUR RESPONSIBILITY address with stamp the People's Bank, Leslie, Michigan, postmaster, express agent, or any official, professional or business man of the same place.

WE MAINTAIN OUR GRADE by a careful selection of stock plants, and right method of propagation from year to year, that tend with such a soil to produce stock of the greatest health and vigor, striving for the ideal fruiting row and perfect fruit from any plants that may be left unsold.

OUR PLANTS ARE FRESH DUG as wanted, nicely trimmed, ready for planting, carefully re-sorted and tied in bunches of 25; roots washed in cold water if necessary to make them clean, and packed with live moss in new handle baskets lined with oil paper, or in light ventilated crates, in such a manner that we guarantee safe arrival in good condition by express or mail to all parts of the United States. Plants by freight at buyer's risk.

TRUE TO NAME. We take great pains to have stock true to name and hold ourselves ready upon proper proof to refund money or replace any that prove untrue; but it is mutually agreed that we shall not be liable for a greater sum than the amount paid for such stock.

SUBSTITUTION. Early in the season we have everything listed in this catalogue, but late in the season usually sell out of some varieties. In case we are out of varieties ordered please say if we shall substitute some variety of same season, suitable for your locality. We always notify customer if we have time to receive your answer before you wish plants shipped, but in case you do not request us to substitute we shall return the amount for the plants we do not have.

OUR PRICES AVERAGE LOWER than can be found elsewhere, when quality of stock and guarantee conditions are considered. Our references for responsibility are ample. You take no risk whatever. See elsewhere a certificate of health from the State Department of Agriculture. Read our unsolicited testimonials. We invite investigation at all times.

Order Direct From Grower, Get Fresh Dug Plants, and Save Time and Money

HOW TO SHIP

Express is generally satisfactory and the best way to ship plants if your order is large, or if the distance is great.

Parcel Post. Generally cheapest and most satisfactory for small shipments and with larger shipments in adjoining and nearby States.

In remitting postage, always add it to the foot of the order as a separate item. This will help to avoid mistakes. Your local postmaster will inform you what zone you are in from Leslie, and you can add for postage accordingly.

Plants vary so much in weight, as some varieties make small plants, while others make large, that it is impossible to give you the exact weight.

We have tried to give you an approximate estimate of the weight of different plants. Can send orders C.O.D. for postage, if desired.

With the zone rate published below, you can easily calculate the amount of postage to send. Be sure to send postage enough. If you should send more than is required, the excess will be returned.

1st	0 to 50	7 cts.	1 ct. for each or fraction
2nd	50 to 150	7 cts.	1 ct. for each or fraction
3rd	150 to 300	8 cts.	2 cts. for each or fraction
4th	300 to 600	8 cts.	4 cts. for each or fraction
5th	600 to 1000	9 cts.	6 cts. for each or fraction
6th	1000 to 1400	10 cts.	8 cts. for each or fraction
7th	1400 to 1800	12 cts.	10 cts. for each or fraction
8th	1800 up	13 cts.	12 cts. for each or fraction

Our Raspberry Fields Have Been Inspected Twice by the State Inspector During the Past Summer and Pronounced Free from Disease Both Times.

RED RASPBERRIES

The Cuthbert Red Raspberry is the standard among reds. They are very vigorous, healthy and productive. The berries are very large, deep red in color and of the very finest flavor. It is the ideal variety for table use and canning. It ripens in midseason and continues to very late. It is very IMPORTANT to have the plants shipped as early as possible in the spring. If not ready to plant when your order arrives the plants may be heeled in the ground and kept until ready. Plants shipped early go through in better shape before the new sprouts have started. Dozen—50¢; 50—\$1.50; 1M—\$20.00.

BLACKBERRIES

The culture is about the same as the Raspberry. The canes should be pinched back when they reach the height of 3½ to 4 feet. They should be planted in rows 6 or 7 feet apart and 3 to 5 feet in the rows.

ELDORADO—

This is undoubtedly one of the best blackberries. Its large size and delicious quality puts it far in advance of some other varieties. It is very hardy and never winter kills in northern climate. The berries are large, jet black, borne in large clusters and ripen well together. Dozen—\$1.00; 100—\$3.00; 1M—\$40.00.

CERTIFICATE OF NURSERY INSPECTION

THIS IS TO CERTIFY, That we have examined the nursery stock and premises of The E. W. Potter Co., Leslie, Michigan, and find them apparently free from dangerous insects and dangerous contagious tree and plant disease.

This certificate to be void after Sept. 15, 1930.

STATE DEPARTMENT OF AGRICULTURE

Agricultural College, Michigan, Sept. 26, 1929.
